Superdry®Careers

Senior or Mid-Range Java Developer – Cheltenham

Salary: competitive

Superdry is a genuine British success story that has grown to an annual turnover of £872m, with our brand already worth £1.6bn in total global consumer sales. We are a multichannel operator with well-developed and highly successful retail, ecommerce, wholesale and franchise businesses and customers in virtually every country in the world. We are well on our way to achieving our goal of becoming a global digital brand.

The Role

Our in-house ecommerce team design, develop, test, support and maintain all of our websites, and are responsible for keeping them fresh and updated with the most cutting edge functionality, to give the very best user experience. These roles, sitting within our web development team, will play a key role in the delivery of new websites, improvements to usability, and crucial back end systems.

The successful candidate will be expected to contribute to the existing and future development of our ecommerce platforms by providing high quality development and recommendations for improvements, working collaboratively with colleagues across the Digital function. The roles will suit candidates with solid experience in Java and Node development, who are passionate to make a difference and become a part of a team supporting a truly global business.

You will

- Work as a hands-on developer to develop new features and functionality for the internal back end ecommerce systems, specifically our internal suite of bespoke applications, programming in Java and Node
- Maintain existing features and functionality, ensuring that the implementation of new development or updates do not affect the smooth running of any of the peripheral systems
- Work with architects to ensure the solution is sitting in line with their recommendations and the technical strategy.
- Work closely with the Test & Support team, responding to feedback and requests for changes, reworking the development to ensure any issues are dealt with and improvements made, including troubleshooting and resolving issues as quickly as possible
- Manage own workload and designing, planning and prioritizing tasks effectively
- Provide appropriate technical support to aid the delivery of projects and releases
- Provide input on improvements to current working practices using experience and judgement
- Demonstrate enthusiasm, proactivity, and strong written and verbal communication skills when dealing with colleagues, partners, suppliers and internal customer

You are

- Highly experienced in working as a Java and Node Developer within a fast-paced, dynamic environment
- Experienced and knowledgeable in other technologies and methodologies such as Object Oriented development, Agile, J2EE and higher, Amazon Web Services (EC2, Lambdas, SQS, ...), SQL (MySQL, Hsql), Hibernate, JBoss/Wildfly and JUnit
- Test Driven Development (TDD), Spring and Angular is also desirable.

Job Description
